Summary

Computer Engineering graduate and backend developer experienced in Java, Spring Boot, and microservices architectures. Builds secure RESTful APIs, optimizes database performance, and integrates event-driven Kafka solutions to engineer scalable, high-volume enterprise applications in fast-paced Agile environments.

Technical Skills

Languages: Java, SQL

Backend: Spring Boot, Spring Security, Spring Data JPA, REST APIs

Architecture: Microservices, API Gateway, Service Discovery

Messaging & Caching: Apache Kafka, Redis

Databases: MySQL, PostgreSQL

Cloud & DevOps: AWS, Docker, Git, Maven

Core Concepts: OOP, Collections, Multithreading, Design Patterns, SOLID

Experience

Assistant System Engineer

April 2025 – Present

Tata Consultancy Services

Navi Mumbai, MH

- Contributed to core banking product development for India's largest public sector bank in an Agile environment. Developed RESTful endpoints using Java, Spring Boot and internal framework for core digital journeys, streamlining customer-facing workflows and data retrieval.
- Improved backend module reliability by writing comprehensive unit and integration tests using JUnit 5 and Mockito, helping identify defects and ensure stable application behavior.
- Refactored code within service modules and optimized data queries to improve code maintainability, modularity, and application performance.
- Supported backend services handling concurrent user requests, contributing to reliable data processing and application performance in a high-volume banking environment.

Projects

Credit Score Analysis Tool | *Java, Spring Boot, Kafka, Redis, OAuth 2.0, MySQL, Docker*

- Developed a microservices-based credit evaluation platform integrating multiple data sources to generate real-time credit scores and predictive analytics.
- Implemented REST APIs using Spring Boot for credit evaluation workflows and business operations.
- Integrated Apache Kafka for asynchronous, event-driven credit processing and communication between services.
- Implemented OAuth 2.0 authentication to secure APIs and Redis caching to reduce repeated database access.
- Used MySQL for persistent data storage and Docker to containerize backend services for consistent deployment.

LinkedIn-Style Networking Platform | *Java, Spring Boot, Microservices, MySQL, Kafka, Spring Security, JWT*

- Developed a microservices-based social networking platform with User, Post, Connection, and Notification services using Spring Boot and REST APIs.
- Implemented Spring Security with JWT authentication and integrated Apache Kafka for asynchronous communication and event-driven notification processing.
- Implemented Eureka Service Discovery and API Gateway for centralized routing and inter-service communication, with MySQL and JPA/Hibernate for persistent data management.

Education

Sinhgad College Of Engineering, Pune

8.32/10

B.E. (Computer Engineering)

August 2020 – June 2024

Muktangan Junior College, Pune

81.54%

HSC (Class 12)

June 2019 – March 2020

Aaryans School, Pune

87.00%

SSC (Class 10)

April 2017 – April 2018

Certifications & Achievements

- AWS Certified Cloud Practitioner
- Star Team Award (×2) - Awarded for cross-functional collaboration in the development, testing, and optimization of robust enterprise backend services.
- 5 stars in Java, SQL on HackerRank
